ISO Patch

You need a clean ISO of the game to use this patch.
Instructions:

- Move your clean Puyo Puyo 7 .ISO in the same folder as patch.bat (WBFS won't work).
- Click patch.bat (just "patch" if you have file extensions disabled).
- Wait for the batch to finish, it will output a WBFS named "RY4J8P.wbfs".

How to run:

- For USB Loader GX users, move the WBFS to a folder named "Puyo Puyo 7 [RY4J8P]" in usb:wbfs/.
- Dolphin users can simply load the WBFS in the emulator.

A custom banner, icon and banner audio are also included in case you want to make a Wii U VC inject of the patch.

Riivolution Patch

You need a retail disc and Riivolution installed on your Wii for this to work.
If you're all set, follow these steps:

- Copy the "pp7" and "apps" folder into your SD card root.
- Boot up Riivolution and insert your Puyo Puyo 7 disc. Then click "Launch".
